

A Cultural Crisis in Prevention

Hispanic men face a **64% higher rate of diabetes**, yet make up only 2% of participants in the CDC's National Diabetes Prevention Program.

A study published in JAMA Network Open reveals why: programs are failing to meet these men where they are—culturally, linguistically, and financially.

What's Holding People Back

Interviews from the study highlight three core barriers:

- **Low awareness** of prediabetes and how to prevent it
- **Skepticism and self-reliance**, leading to delayed action
- **Access challenges**—cost, language, technology, and cultural disconnect
- Even when **translated**, many programs still don't feel culturally relevant.

Chronilogix Solution

Culturally Intelligent Care for Everyone

While focused on Hispanic men, the insight is universal: Care works when people recognize themselves in it.

Chronilogix delivers accessible, high-touch digital coaching that scales across languages, backgrounds, and lifestyles—without cost or access barriers.

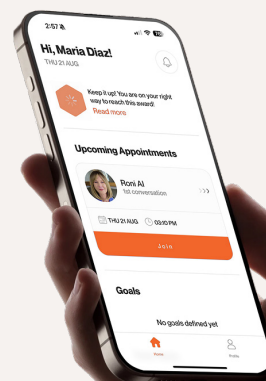

Where Chronilogix Makes the Difference

Chronilogix's AI health coach RONI uses Motivational Interviewing (MI) and culturally attuned communication to help people feel seen, understood, and supported.

Chronilogix adapts to each user's:

- Cultural values
- Dietary norms
- Literacy level
- Tech access
- Behavioral readiness

This approach removes judgment, builds trust, and increases engagement—especially for people historically overlooked by traditional coaching programs.

Why AI Coaching Wins

- ✓ No bias or judgment
- ✓ Replaces up to 70% of human coaches at a fraction of the cost
- ✓ Engages up to 50% more employees who avoid traditional programs
- ✓ Consistent, empathetic, culturally aware guidance—anytime, anywhere culturally relevant.

The Future of Prevention

Diabetes is rising fastest in minority and underserved communities. The solution is clear:

Prevention must be personal—culturally, emotionally, and economically. Chronilogix brings that future to life.
